Known gaps (not yet built)	

Iron Lady LMS — Feature & Review Guide

Purpose: a complete walkthrough of every feature in the LMS, written so a reviewer can open the app, follow along screen by screen, and confirm everything works.

How to use it: work through Parts 1–5 in order. Each screen tells you *where to go*, *what you should see*, and *what to try*. Tick the sign-off checklist at the end.

Before you start

ACCOUNTS YOU’LL NEED

Role	What it’s for	How to get one
Guest	Signed-out preview	Just open the app without logging in
Learner (student)	The main experience	Any enrolled learner account
CX (moderator)	Review + batch management	Admin sets role to <i>Customer Expression</i> and picks a program
Admin	Platform management	Set by a Super Admin
Super Admin	Storage, user deletion	Existing Super Admin account

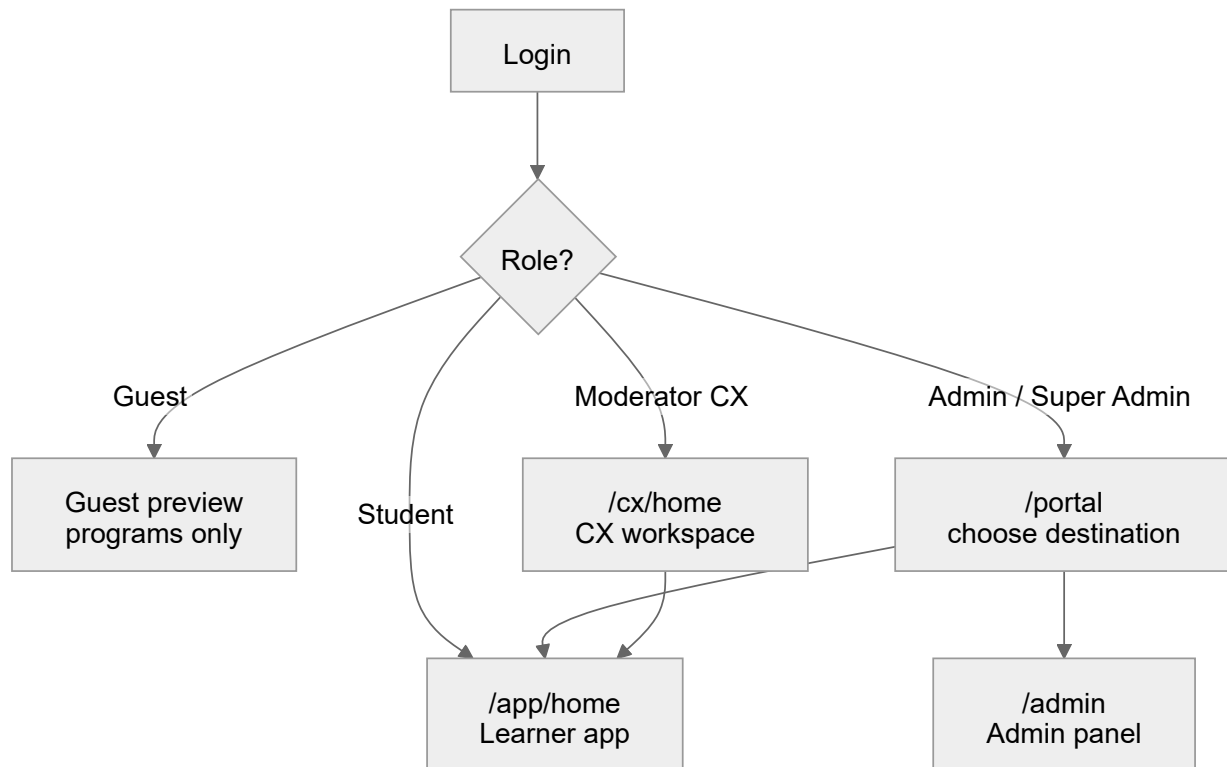

Important: to review the learner journey properly you need a learner enrolled in **at least one program**, ideally one with submitted work so the review flow can be seen end to end.

WHERE TO RUN IT

- **Local:** `npm run dev` → http://localhost:5173SMARTPANTS_RESERVED_155SMARTPANTS_RESERVED_156
- **Live:** [your deployed URL](#)

The five roles at a glance

	<u>Guest</u>	<u>Learner</u>	<u>CX</u>	<u>Admin</u>	<u>Super Admin</u>
<u>Browse programs (preview)</u>	✓	✓	✓	✓	✓
<u>Open enrolled programs</u>	✗	✓	✓	✓	✓
<u>Review submissions</u>	✗	✗	✓	✓	✓
<u>See all batches</u>	✗	✗	✗ (only assigned)	✓	✓
<u>Switch program in CX</u>	✗	✗	✗ (locked to theirs)	✓	✓
<u>Manage users / courses</u>	✗	✗	✗	✓	✓
<u>Delete users, manage storage</u>	✗	✗	✗	✗	✓

Note: program unlocking is based **only on enrolment** — not on role. An Admin still sees only their own enrolled programs in the learner app.

Part 1 — Guest experience

Go to: the app URL, signed out.

What you should see

- Marketing banner carousel (auto-advancing)
- A lock notice: "Journey order: LEP → 100BM → MBW. Sign in to open your enrolled track."
- Three static program cards (LEP, 100BM, MBW), each with **Sign in to continue**
- No real data anywhere — no fake numbers, no invented names

What to try

- Swipe / tap arrows / tap dots on the carousel
- Open **Progress**, **Calendar**, **Support** → each shows a "...locked" panel
- Confirm the notification bell does **not** appear

 **Screenshot:** [docs/screenshots/01-guest-home.png](#) — guest home with the locked notice and three program cards

Part 2 — Learner experience

2.1 THE SHELL (VISIBLE ON EVERY SCREEN)

Top header: Iron Lady logo, streak ring (fills toward the learner's personal best), theme toggle, notification bell with unread badge, and — only for staff accounts — an Admin/CX shortcut.

Bottom nav (5 tabs): Home · Calendar · Progress · Support · Profile

MBW and 100BM are **not** in the bottom nav — they're opened from cards on Home and Progress.

What to try

- Toggle **light/dark** and confirm both are readable
- Open the notification bell → it opens as a **bottom sheet** on mobile, a dropdown on desktop
- Dismiss one notification with **x**, and on mobile **swipe left** to dismiss

- Press **Escape** to close the sheet

 **Screenshot:** <docs/screenshots/02-learner-header-notifications.png> — notification sheet open

Notification types (5)

<u>Kind</u>	<u>Triggered by</u>	<u>Where it goes</u>
<u>News</u>	<u>Announcements (adds “You’re tagged”)</u>	<u>Home</u>
<u>Review</u>	<u>CX reviewed your task</u>	<u>Straight to that lesson</u>
<u>Event</u>	<u>Upcoming calendar event</u>	<u>That date in the calendar</u>
<u>Support</u>	<u>Your open ticket</u>	<u>Support</u>
<u>Support (assigned)</u>	<u>Ticket assigned to staff</u>	<u>Support</u>

2.2 HOME — [/APP/HOME](#)

What you should see (top to bottom)

1. Banner carousel
2. Greeting hero — time-aware (“Good morning/afternoon/evening”), first name, program badge, tagline
3. Quick stats — Open programs · Pending assignments · Upcoming events · Recent actions
4. **Continue learning** card — resumes the highest program you’re enrolled in, with a milestone bar
5. **Schedule** — next 4 events, each with *Google Calendar* and *Open link*
6. **Your programs** — cards sorted enrolled-first, then LEP → 100BM → MBW
7. Announcements feed
8. Last activity (3 items)
9. Pending assignments
10. Your progress — streak, heatmap, attendance

What to try

- Click **Continue learning** → lands on the right next task
- Confirm locked programs still appear, marked *Upcoming* or *Locked*, with **View program** linking to the public marketing page

- [Add an event to Google Calendar](#)

 **Screenshot:** [docs/screenshots/03-learner-home.png](#) — full dashboard

2.3 PROGRESS — [/APP/PROGRESS](#)

What you should see

- [4 clickable stats \(Programs, Overall %, Resources, Streak\) — each scrolls to its section](#)
- [MBW progress panel — big % ring, “N of M milestones”, “Up next”, **Continue to study**, plus sub-rings for *Lesson videos* and *Assignments*](#)
- [Enrolled programs with % bars](#)
- [Resources with a per-program filter, each Open \(new tab\) or Locked](#)
- [Activity log \(last 30, enrolled programs only\)](#)
- [Streak summary — Current / Best / Submissions](#)

What to try

- [Click each stat and confirm it scrolls](#)
- [Filter resources by program](#)
- [Click **Continue to study** → resumes at the exact next task](#)

 **Screenshot:** [docs/screenshots/04-learner-progress.png](#)

2.4 CALENDAR — [/APP/CALENDAR](#)

What you should see

- [Colour legend: Class/Session · Deadline · Meeting · General](#)
- [Agenda and Month toggle — defaults to *Agenda on mobile*, *Month on desktop*](#)
- [Month grid with up to 2 event chips per day plus “+N more”](#)
- [Selected-day sidebar with image, type badge, time, description](#)

What to try

- [Switch Agenda ↔ Month; resize the window and confirm the default follows the viewport](#)
- [Tap a day → sidebar loads that day](#)
- [Google Calendar and Open link buttons](#)
- [Deep link: `/app/calendar?date=2026-08-01` should jump and select that date](#)

 **Screenshot:** <docs/screenshots/05-learner-calendar.png>

2.5 SUPPORT — </APP/SUPPORT>

What you should see

- [Create a ticket](#) — Category, Subject, Message (all required)
- [My tickets](#) — list plus a message thread, with learner vs staff messages styled differently

What to try

- [Raise a ticket](#) → it auto-selects
- [Edit](#) and [Delete](#) (only available while status is *Open*)
- [Send a reply](#)
- Confirm a **Resolved** ticket hides the reply box and shows the resolved note

 **Screenshot:** <docs/screenshots/06-learner-support.png>

2.6 PROFILE — </APP/PROFILE>

- [Your identity](#) — editable display name; email and role read-only
- [Preferences](#) — theme toggle
- [Workspaces](#) — only for staff accounts ([Super Admin](#) / [CX](#) / [Admin shortcuts](#))
- [Help & support](#) → [Support](#)
- [Sign out](#) — with a confirm dialog

 **Screenshot:** <docs/screenshots/07-learner-profile.png>

2.7 COURSE DETAIL — </APP/COURSE/:ID>

- [Hero](#): cover, program tag, **Enrolled** chip, duration/format, progress bar
- [Your CX contacts](#) — real moderators only; renders nothing if none assigned (no placeholder people)
- [How it works](#) — 4 steps; MBW version explains the 90% watch rule and CX review
- [MBW only](#): full program journey inline, progress rings, upcoming events
- [Session recordings](#) — your batch's recordings grouped by phase
- [Lesson resources](#) — [Open](#) (logs an activity) or [Locked](#)

 **Screenshot:** <docs/screenshots/08-course-detail.png>

2.8 MBW PROGRAM — </APP/MBW>

Two modes: **Overview** and **Lesson** ([?lesson=<id>](#)).

Overview

- [Hero: “1 year”, cohort label, progress band, **Next up, Resume**](#)
- [First-time panel for new learners](#)
- [Your journey — 8 sections, each with a gold progress ring and Start/Continue/Review:](#)

Section	Content	Gate
Pre-Preparation	12 lessons	Open
Quarter 1	17 lessons (Wk1–12)	—
Quarter 2	17 lessons (Wk13–24)	After Q1 + paid
Quarter 3	17 lessons (Wk25–36)	After Q2 + paid
Quarter 4	17 lessons (Wk37–48)	After Q3 + paid
Graduation	5 lessons (Wk49–52)	After Q4 + paid
Monthly Session Recordings	Batch recordings	Batch
C-Suite League Community	Discussions	Membership

- [My submissions](#) archive (collapsible)
- [Amber sync warning](#) if work saved device-only, with **Retry sync**

Lesson mode

- [Topbar with **Outline** button → full-screen curriculum drawer](#)
- [The task itself \(see 2.10\)](#)
- [Sticky footer: **Previous / Next lesson** \(only once complete\), plus a “Lesson saved” banner](#)

 **Screenshots:** <docs/screenshots/09-mbw-overview.png>, <docs/screenshots/10-mbw-lesson.png>

2.9 100BM PROGRAM — [/APP/100BM](#)

Same structure as MBW, with these differences:

- "6 months", boardroom framing
- Sections: Onboarding → Phase 1 Foundation → Phase 2 Pitch & Strategy → Phase 3 Board Ready → Phase 4 Challenges → Graduation
- Section headers use a **status dot + done/total**, with a **padlock** on payment-gated phases
- **Payment gating is prominent** — a banner explains registration access covers Onboarding + Phase 1 only, and the hero CTA becomes **Payment support**
- Adds a **Session materials** block (resource links + template downloads)

 **Screenshot:** [docs/screenshots/11-100bm-overview.png](#) — ideally showing the payment-gated phase

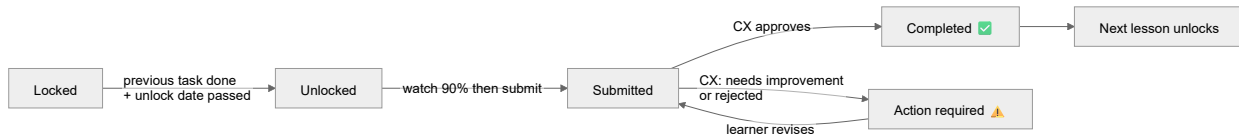

2.10 THE 8 TASK TYPES

#	Type	What the learner does
1	<u>Watch only</u>	<u>Watch to 90% — auto-completes</u>
2	<u>Text</u>	<u>Write into a textarea; optional template downloads</u>
3	<u>Link</u>	<u>Paste a URL; validated before submit</u>
4	<u>ERRC template</u>	<u>Eliminate/Reduce/Raise/Create grid — cards on mobile, table on desktop. Stays editable</u>
5	<u>File upload</u>	<u>Pick a file; progress bar + Cancel upload; optional tasks can be skipped</u>
6	<u>Video record</u>	<u>Record in-app (5 min cap, live timer) or upload (200 MB cap); retake; progress + cancel</u>
7	<u>Recurring post</u>	<u>Paste a weekly post link; shows "N / M posts" and past weeks</u>
8	<u>Checklist</u>	<u>Tick items — auto-saves each toggle; completes at 100%</u>

What to try: at minimum submit a **text**, a **link**, and a **file upload** so you see the progress bar and cancel button.

 **Screenshots:** [docs/screenshots/12-task-video-gate.png](#), [docs/screenshots/13-task-errc.png](#), [docs/screenshots/14-task-upload-progress.png](#)

2.11 HOW UNLOCKING WORKS

Three rules worth testing

1. **90% watch gate** — the submission form stays disabled until the video hits 90%. YouTube videos can't be tracked, so they show an *"I finished watching"* button instead.
2. **Sequential unlock** — a lesson opens only when the previous one is done (or optional).
3. **Sent back = not done** — a task marked *needs improvement* or *rejected* stops counting as complete, **re-locks the next lesson**, and becomes the learner's resume target again.

2.12 REVIEW FEEDBACK (LEARNER SIDE)

<u>CX outcome</u>	<u>Learner sees</u>	<u>Colour</u>
<u>Approved</u>	<u>Approved</u>	<u>Green</u>
<u>Needs improvement</u>	<u>Action required</u>	<u>Amber</u>
<u>Rejected</u>	<u>Action required</u>	<u>Red</u>

Appears as a **Review feedback** block at the bottom of the task, with the CX note and the review date. When action is required, the form reopens for resubmission and a notification is sent.

 **Screenshot:** <docs/screenshots/15-learner-review-feedback.png>

2.13 LOCKED AND BLOCKED STATES

- **Guest locked panel** — lists the four locked areas plus a contact link
- **Program locked panel** — *Upcoming in your journey vs Access restricted*, with **Speak to our Counsellor**
- **Blocked account** — replaces the whole app; auto-restores within 30s once an admin unblocks

 **Screenshot:** [docs/screenshots/16-program-locked.png](#)

Part 3 — CX (Customer Expression) workspace

Go to: [/cx/home](#) — 5 tabs: Home · Analytics · Batches · Reviews · Profile

Scoping — test this first. A CX moderator sees **only batches where they are the lead**, and is **locked to one program** (static badge in the header). An Admin sees **all batches** and gets a **program switcher dropdown**.

3.1 CX HOME — [/CX/HOME](#)

- [Greeting hero + Refresh](#)
- [KPIs: Participants · Needs attention · Tasks completed %](#)
- [Needs your attention](#) — up to 8 submissions, resubmit-first then oldest-first
- [Your batches](#) sidebar
- [Remind](#) on a batch → session reminder modal (optional message)

 [docs/screenshots/17-cx-home.png](#)

3.2 REVIEWS — [/CX/REVIEWS](#)

- [Filters: All submissions · Needs review · Awaiting resubmit](#) (with counts)
- [Batch filter dropdown](#)
- [Rows: learner, task, batch · time ago, status pill](#)
- [Remind](#) on action-required rows

 [docs/screenshots/18-cx-reviews.png](#)

3.3 TASK REVIEW — THE CORE WORKFLOW

What you should see: the learner's actual submission rendered read-only — [text](#), [link](#), [file download](#), [inline video/audio player](#), [ERRC table](#), [weekly posts](#), or [checklist](#).

What to try

1. [Approve one](#) → banner says the learner can continue; **no** notification is sent
2. [Try Needs improvement without feedback](#) → blocked with *"Add feedback so the learner knows what to improve."*
3. [Add feedback and save](#) → learner is notified

4. [Log in as that learner](#) → confirm **Action required**, the next lesson re-locked, and [resubmission works](#)

⚠ **This is the single most important flow to test end to end.**

 [docs/screenshots/19-cx-task-review.png](#)

3.4 BATCHES — [/CX/BATCHES](#)

- **New batch** — name + description; creator is auto-added as lead (this is what keeps it visible to them)
- [Table: Batch · Description · Members · Manage](#)

3.5 BATCH DETAIL — [/CX/BATCHES/:ID](#)

- **Manage batch** — edit name/description, **Add learner**, **Move to...**, **Remove**; *Delete batch* is admin-only
- **Session recordings by phase** — paste unlisted YouTube/Drive/Zoom links per session; shows uploaded/total coverage; warns before replacing an existing video
- **Stat cards** (clickable → participant list): [Enrolled](#) · [Active 7d](#) · [Active 30d](#) · [Never active](#) · [All tasks done](#) · [Completion %](#)
- **Attendance** (only when courses are linked to the batch in Admin): [Average](#) · [Have records](#) · [Good ≥80%](#) · [At risk <60%](#)
- **Completion by module** with clickable done/pending counts
- **Learners list** — last active, tasks x/y, attendance %

 [docs/screenshots/20-cx-batch-detail.png](#), [docs/screenshots/21-cx-recordings.png](#)

3.6 ANALYTICS — [/CX/DASHBOARDS](#)

KPI strip: [Participants](#) · [Active 7d](#) · [Batches](#) · [Task completion %](#) · [Pending reviews](#) · [Awaiting resubmit](#) · [Session videos](#) · [Avg attendance](#)

Three tabs:

- **Overview** — 4 charts: [Cohort journey](#) · [Payment status](#) · [Participant activity](#) · [Task completion donut](#). **Every segment is clickable** and opens the participant list; there's also a [keyboard-accessible legend](#).
- **By batch** — [batches table with progress](#)
- **By task** — [completion by batch chart + task-by-task breakdown with clickable counts](#)

 [docs/screenshots/22-cx-analytics.png](#), [docs/screenshots/23-cx-drilldown.png](#)

3.7 CX VS ADMIN — DIFFERENCES TO VERIFY

<u>Capability</u>	<u>CX moderator</u>	<u>Admin</u>
<u>Batches visible</u>	<u>Only theirs</u>	<u>All</u>
<u>Program</u>	<u>Locked (static badge)</u>	<u>Switcher dropdown</u>
<u>Delete batch</u>	<u>Hidden</u>	<u>Visible</u>
<u>Cross-program enrolment bar</u>	<u>Hidden</u>	<u>Visible</u>
<u>Header link</u>	<u>"LMS"</u>	<u>"Admin"</u>

Part 4 — Admin panel

Go to: [/portal](#) → Open admin section, or [/admin](#) directly. 12 tabs.

Moderators who reach [/admin](#) are redirected to [/cx/home](#) .

#	Tab	What's in it
1	Overview	7 stat cards, 6 charts, 4 CSV exports (Summary, Users, Activity, Tickets), recent activity
2	Users	Search, role assignment, CX program picker, block/unblock. <i>Delete user is Super Admin only.</i> Protected accounts can't be blocked
3	Support tickets	Filters incl. <i>Assigned to me</i>; assign, edit subject, delete, reply, resolve, reopen
4	Progress	Per-learner table + read-only progress modal
5	Activity	Platform-wide (150) or per-user (30)
6	Calendar	Create/edit/delete events with type, link, and image upload
7	Announcements	Duration (24h/7d/30d), audience (Everyone / Tagged only), user tagging
8	Courses	Create/edit/delete; thumbnail upload; intro video
9	Resources	Add via link or upload (PDF/PPT); type; Lock/Unlock
10	Batches	Create with program + CX leads; add learners; Add course (this is how enrolment happens); move/remove members
11	Zoho CRM	Test connection, push users, provision from Zoho, browse Leads / IL Users, Batch mapping preview (read-only)
12	MBW Tasks	Completion matrix (read-only); moderators see only their batches

What to try

- [Export the Users CSV](#)
- [Change a role to *Customer Expression* → confirm you're asked for a program](#)
- [Lock a resource → confirm the learner sees **Locked**](#)
- [Add a course to a batch → confirm the learner is now enrolled](#)

 [docs/screenshots/24-admin-overview.png](#), [docs/screenshots/25-admin-users.png](#),
[docs/screenshots/26-admin-batches.png](#), [docs/screenshots/27-admin-zoho.png](#)

Part 5 — Super Admin extras

[Everything an Admin has, plus:](#)

<u>Feature</u>	<u>What it does</u>
<u>Storage tab</u>	<u>Total storage, indexed files, orphans; by folder and by user; file registry (200 rows)</u>
<u>Scan & index bucket</u>	<u>Links every file to its course/resource/event/submission</u>
<u>Clean orphan files</u>	<u>Deletes unlinked files only</u>
<u>Delete selected / per-user storage</u>	<u>Bulk and per-learner deletion</u>
<u>Delete user permanently</u>	<u>Cascades: login, profile, submissions, activity, attendance, tickets, files</u>
<u>Assign Super Admin role</u>	<u>Only available here</u>

⚠ These are destructive and permanent — review carefully, and prefer a test account.

 `docs/screenshots/28-superadmin-storage.png`

Part 6 — Integrations

- **Zoho CRM** — programme, payment status, access tier and login credentials flow **from Zoho into the LMS**. Staff programmes are never overwritten by Zoho.
- **Batch mapping preview** — a **read-only dry run** showing which batches *would* be created from Zoho. It writes nothing.
- **Notifications** — push/email via Cloud Functions: task reminders, review outcomes, session reminders, weekly LinkedIn reminder.
- **Storage** — uploads go to Firebase Storage with a Firestore registry; if storage is unavailable, work is saved on-device and the learner is told.

Reviewer sign-off checklist

LEARNER

- ☐ Guest sees preview only, no real data
- ☐ Home loads with correct programs; locked ones show as Upcoming/Locked
- ☐ Continue learning resumes the right task

- ☐ [Video gate blocks submission until 90%](#)
- ☐ [Submitted a text, link, and file task successfully](#)
- ☐ [Upload showed a progress bar and could be cancelled](#)
- ☐ [Calendar switches Agenda/Month; Google Calendar works](#)
- ☐ [Raised, edited, and replied to a support ticket](#)
- ☐ [Notification bell opens, dismisses, and deep-links correctly](#)

CX

- ☐ [Sees only their own batches and their own program](#)
- ☐ [Review queue filters and batch filter work](#)
- ☐ [Approve works; no notification sent](#)
- ☐ [Needs improvement **blocked without feedback**](#)
- ☐ [Learner sees “Action required”, next lesson re-locks, resubmission works](#)
- ☐ [Created a batch, added and moved a learner](#)
- ☐ [Added a session recording; replace warning appeared](#)
- ☐ [Analytics charts drill down to participant lists](#)

ADMIN

- ☐ [All 12 tabs load](#)
- ☐ [Role change works; CX program prompt appears](#)
- ☐ [Blocked a learner → they see the blocked screen; unblock restores within 30s](#)
- ☐ [Created an event and an announcement; learner sees both](#)
- ☐ [Locked a resource → learner sees Locked](#)
- ☐ [Added a course to a batch → learner enrolled](#)
- ☐ [CSV exports download](#)

SUPER ADMIN

- ☐ [Storage tab loads with totals](#)
 - ☐ [Scan & index completes](#)
 - ☐ [Delete user works on a **test account only**](#)
-

Known gaps (not yet built)

Do not review these — they don't exist yet:

- **No CSV export in the CX area** (admin has exports; CX does not)
- **No bulk reminder** — reminders are per-learner or per-batch only
- **Attendance is read-only in CX** — marking attendance isn't a CX action, and linking courses to batches happens in Admin
- **Zoho batch auto-creation is preview only** — nothing is written yet
- Unshipped components exist in the codebase (`CxWorkQueue` , `ModuleTaskGrid` , `ModuleTaskWise` , `TaskTrackingBoard`) but are **not reachable in the app**

Generated from a full audit of the codebase. Every feature listed was verified as present and reachable.
